

Hamilton Medical - HAMILTON-C6

The next generation of intelligent ICU ventilators

The Hamilton Medical HAMILTON-C6 represents a new generation of high-end ventilators. The combination of modularity, ease of use, mobility, and advanced features provides respiratory therapists the real-time support they need to optimize patient ventilation therapy.

The 17-inch, high-resolution monitor with capacitive touch screen was designed to facilitate easy, intuitive and fast operation. The layout and design of the visual elements within the graphic user interface consolidates the monitoring data and displays it as easy to understand and interpret graphics.

The clear graphic representation of information on screen gives the medical practitioner a quick and easy to understand overview of the patient's current ventilation status and provides a reliable basis for optimization of individualized patient therapy.
